- Transaction Verification System (TVS) Compatible

### Introducing Unify3, the next step in point of sale retailing

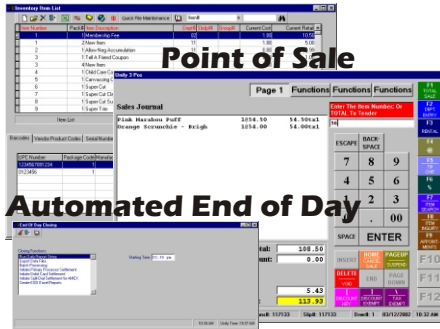

**Unify3** is a highly customizable, robustly featured point of sale (POS) software application, which is ideal for small to large General Merchandise Retailers. Manage sales entry, customers, inventory, reporting, employee time keeping, and other vital store management functions with ease. With multiple options and configurations **Unify3** can be tailored to your store without a large investment. **Unify3** uses a fast, reliable **Progress** relational database utilizing system redundancy, so if your server goes down, your store won't.

### A myriad of the latest POS hardware to choose from

**Unify3** is fully OPOS compliant offering you a wide variety of operator interfaces and hardware devices to integrate into your POS system. In fact, **Unify3** is certified "**Store Proven**"™ with IBM™. OPOS makes it easy for you to plug in your device, set it up, and start using it. The growing popularity of OPOS as an industry standard puts **Unify3** well in place to grow with the growing technology of point of sale devices. Already, a multitude of high tech devices are available for you to select from including all-in-one registers, receipt printers, scanners, scales, customer displays, and transaction verification systems, which all increase the efficiency of your store. And **Unify3** touch-screen capacity can speed your cashiers and reduce new employee's training time.

### Store Administration

## Add the modules you need for your store

**Unify3** has an abundance of features included with the base system, but if that is not enough for your store, **Unify3** offers numerous add-on modules that allow even more features. The **Credit Authorization** module allows you to process credit cards and includes the additional Authorizer™ software. The **Stock Replenishment** module precisely restocks your depleted inventory in a variety of methods assuring your store is always stocked. The **Physical Inventory** module utilizes bar code technology to quickly bring item level inventory counts back in line. The **Item Movement Historical Analysis** module maintains item movement history. The **Label/Ticket Printing** module prints shelf labels, price stickers and ring tags. The **RentalPro** module handles all the tasks of a video or equipment rental store. The **TagPro3** price tag production module rapidly processes price tags, ideal for stores where inventory is always changing. The **Repair Trak** module provides full repair order tracking for service-oriented businesses. The **Weekly Labor Scheduling** module provides you with the capability to project a weekly work schedule for your employees based on a set of "business rules". The **Appointment Scheduler** handles appointment scheduling for outfits such as salons and doctor's offices.

## Optional Modules

- Store Inventory Replenishment
- Physical Inventory
- Labor Scheduling
- Item Movement / Historical Analysis
- Credit Authorization
- Bar Code Printing
- Repair Track
- Appointment Book
- Rental Pro
- Eye NET

## Invest less for tailoring a POS system to your store

**Unify3** has so many different customizable features and configurations, you can tailor it to your store without investing a great deal for custom software. You can customize the look and feel, the order and the state of function buttons. Customize the configuration of the POS screen, placing only the needed functions in front of your cashiers. Grant employees different security levels, allowing only the functions you want them to perform: sales entry only, file maintenance only, full access, or whatever functions you want to allow. Custom tailoring your POS system will make your administrators and cashiers more efficient and will greatly reduce training expenses.

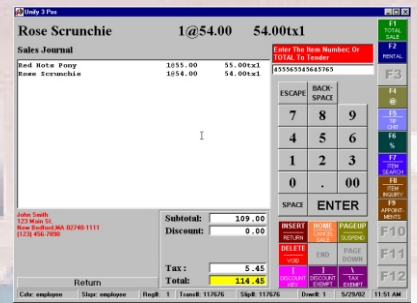

## System redundancy assures if your server goes down, your store won't

The Progress database is installed on both the server and registers, and the register's database is updated regularly when connecting to the server. If your server crashes, **Unify3** will immediately restart using the local database, which will keep your store up and running. Once the server is online again, the registers will reconnect after restarting **Unify3**, and the server will be updated automatically; no file transfers or updates to run. You will be more profitable when your store continues to operate during an inevitable crisis. In today's competitive retail environment you need every edge possible.

## A user-friendly POS interface increases your cashier's efficiency

Unify3 has a state of the art, graphical user interface that is easy to learn and easy to use. Everything that your cashiers need are right at their fingertips, and because it is so easy to use, you do not need to invest a great deal to train your staff. Errors at point of sale and the time of checkout will be greatly

reduced, which will make your staff and customers happy.

The POS Screen is organized to display all vital information to the cashier.

**'Other software that I've worked with ... took longer to scan the item than Unify3 took to search it's entire database.'**

-Chuck Bensinger, MCSE  
DCRS, St. Louis, MO

## Export sales data to the financial package of your choice

Don't worry about changing your current financial software. Sales data collected in **Unify3** can be exported in ascii or Excel format to the financial package of your choice, which leaves your options wide open for financial system integration.
